Art Unit: 3742

Claim Rejections - 35 USC § 112

Claim 13 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

At line 10 of the claim, "between opposing corners" is unclear because the geometry of the spike is not sufficiently defined to establish the existence of corners.

At line 14, "said condiment receiving channel" lacks antecedent basis.

Claim Rejections - 35 USC § 102

Claims 1-3, 6-14, and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. 1902564.

Referring to Figs. 1-3 and lines 45-66, US'564 discloses a heated bread toasting spike 25 formed of planar surfaces so as to create condiment channels in a bread item, "comprising" a uniform cross section (the upper portion) and also "comprising" a non-uniform cross section (the bottom segment).

The Examiner notes initially that although US'564 suggests the use of spike 25 for hamburger or chili, and the instant claims contemplate, though do not recite a cylindrically shaped sausage, both are intended uses and therefore not germane to the patentability of the device. The buns formed with the device of US'564 are quite capable of the contemplated use.

Claim Rejections - 35 USC § 103

Claims 4, 5, 15-17, and 43-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over US'564 in view of US Pat. 1589850.

The claims differ from US'564 only in calling for alternative polygonal cross sections for the cavity, curved segments, a circular cross section large enough to accommodate condiments, and inserting the bread item into "an impaling system prior to impaling it. However, US'850 discloses, at Figs. 5 & 6 and lines 65-79, an alternative polygonal cross section for a sausage cavity in a bun with channels to accommodate condiments. More particularly, US'850 teaches that the cavity shape produced by spike 25 of US'564 is appropriate for condiments. It would have been obvious to utilize alternative cross sections for the cavity of US'564, of diverse geometrical shapes, since US'850 shows that an 8-pointed star shape adds aesthetic to the practical appeal. Curved segments are certainly obvious geometrical variations on regular polygons, and a circular cross section large enough to allow condiments, in the case of spike 11 of US'564 for instance, is rendered obvious as well by US'850.

Allowable Subject Matter

Claims 19-42 are allowed.
